Summary

Senior research engineer with a PhD in physics, passionate about developing numerical and theoretical frameworks that advance product development through machine learning and software engineering. Highly skilled in programming, engineering simulations, and analyzing data. Expert in Python with a strong foundation in deep learning, complemented by a 10+ years track record in high-performance computing. *Some metrics: Authored 20 articles with over 900 citations, developed 5 codes, supervised 3 PhD students and 2 MSc students, and presented research findings at 31 occasions.*

Work Experience

Senior Research Engineer

Soroco, USA

APPLIED MACHINE LEARNING

2024 - present

Driving the development of cutting-edge machine learning solutions for the Work Graph model in Scout, leveraging AI techniques to extract and interpret digital interactions at scale. Specialized in computer vision and deep learning, with expertise in data synthesis, model development, performance optimization, and deployment at the edge for efficient real-time inference.

Horizon Postdoctoral Research Fellow

Johns Hopkins University, USA

ADVISOR: PROF. MARC KAMIONKOWSKI

2022 - 2024

Deeply immersed in the development of numerical frameworks in modern cosmology and astrophysics, spanning three main directions: **1)** building a multi-probe, high-performance Bayesian analysis (MCMC) pipeline tailored to investigate properties of the Universe using telescope data of young galaxies, **2)** leveraging machine-learning techniques to write GPU-accelerated gravity simulations, and **3)** applying deep-learning methods to optimize signal extraction in noisy astrophysical data.

Education

PhD in Physics

King's College London, UK

ADVISOR: PROF. DIEGO BLAS

2018 - 2022

Research in fundamental physics, with an emphasis on developing numerical simulations and using cosmological, astrophysical, and laboratory probes to constrain particle physics and cosmological models. Thesis can be found [here](#).

Master of Science in Theoretical Physics

Leiden University, Netherlands

THESIS: "HEAVY NEUTRAL LEPTONS DURING THE BIG BANG NUCLEOSYNTHESIS EPOCH"

2016 - 2018

GPA: 9.0/10 (Cum Laude)

Double Bachelor of Science in Physics and Astronomy

Leiden University, Netherlands

THESIS: "CONSTRAINING COSMOLOGICAL PARAMETERS USING THE CLASS CODE"

2013 - 2016

GPA: 9.0/10 (Cum Laude) in both degrees

Technical Skills

Programming Languages:

- **Python:** 12+ years expertise in writing codes, pipelines, and packages, utilizing key libraries such as NumPy, SciPy, Numba, emcee, Matplotlib, PyTorch, and JAX.
- **Mathematica:** 6+ years proficiency in writing scientific software and crosslinking with Python.
- **C++:** 1+ years experience in writing C++ code and wrapping within Python to accelerate simulations.

Software Development:

- **REC21:** 3D generative modeling framework in PyTorch to reconstruct astrophysical signals from noisy radio data.
- **GALLUMI:** Multi-probe Bayesian analysis pipeline in Python designed for analyzing galaxy datasets.
- **Cheetah:** GPU-accelerated gravity simulation in JAX, achieving a speed increase of 500+ times.

- **pyBBN**: Code in Python, C++, and Fortran that simulates the early Universe during primordial nucleosynthesis.
- **samplex**: Package that includes useful inference algorithms written in MLX.

Machine learning: Experience in designing, training, and evaluating tailored neural network architectures for supervised and unsupervised learning on astrophysical and enterprise data. Skilled in computer vision, deep learning, and optimizing models for efficiency and deployment in real-time and edge environments. Architectures include MLPs, CNNs, GNNs, normalizing flows, autoencoders, diffusion models, and transformers.”

HPC: 10+ years expertise in high-performance computing using both CPU and GPU platforms, including experience with tier-1 supercomputers. Proficient in SLURM workload manager and other HPC-specific software tools.

Other Experience

Referee for Science Journals

The Astrophysical Journal, Physical Review, Astronomy & Astrophysics, International Journal of Modern Physics, Journal of Cosmology and Astroparticle Physics.

Supervision and Teaching

Supervised PhD and MSc students in their research and teaching undergraduate courses.

Seminars and Colloquiums

Organizer of the joint physics and astronomy seminar series at JHU and committee member for STScI colloquiums.

Extracurricular

Project lead for imaging analysis of the Cosmic Horseshoe lensing system using the Isaac Newton Telescope in La Palma.

Outreach

Mentored A-level students in the UK as part of the Realising Opportunities program.

Awards and Certificates

Hendrik Casimir Prize

Awarded by the Casimir Research School for best performance during the Master’s program in physics.

Young Talent Encouragement Award

Awarded by the Royal Holland Society of Sciences and Humanities for best performance during the first year of the Bachelor’s program in physics.

Languages

Fluent: English, Dutch

Intermediate: Arabic

Basic: Russian
